

## **ULTRALIFE ANTIOXIDANT**

### **Superior anti-ageing complex**

Pasty complexion? Lacklustre hair? Sluggish metabolism? When you've lost your sparkle there are some problems that even the most expensive creams and potions cannot resolve.

Antioxidants, however, are the modern woman's armoury in the anti ageing battle and a new vitamin drink launched this month in the UK may, for once, have our doctor's and beauticians in mutual agreement.

**Ultralife Antioxidant**, produced by UK healthfood manufacturer Ultralife, features a patented combination of vitamins and minerals in an easy-to-mix, pleasant tasting drink formula. Proven to fight disease and neutralise free radicals, the drink is the perfect antidote to today's environmental toxins.

Unfortunately, one of the main victims of 'free radical' damage is our skin - the first organ of the body to show visible signs of 'wear and tear'. But antioxidant nutrients (which include vitamins A, C and E, some of the B complex vitamins, the minerals selenium, manganese and zinc, and certain enzymes) can also help prevent more serious, degenerative diseases such as cancer and heart disease.

The key active ingredients in **Ultralife Antioxidant** are Oligomeric Proantho Cyanidins (OPCs). These are a group of flavanoids extracted from grape seeds that have been shown to be some of the most powerful antioxidants found to date. OPCs are estimated to have an antioxidant effect which is about 50 times greater than vitamin E or the mineral selenium, and about 20 times that of vitamin C. When combined with vitamins A, C and E, as in the case of **Ultralife Antioxidant**, the antioxidant activity of OPCs can be increased a further 3-fold.

By simply mixing with water, one glass of tropical or orange flavoured **Ultralife Antioxidant** 'juice' can supply the RDA and fight environmental chemicals, solar radiation, petrochemicals in cosmetics, pesticides in foods and exposure to synthetic chemicals. Experience liquid beauty - radiance from the inside out!
