

## **Corporate Information**

Eating well doesn't just make you look and feel better. There is overwhelming evidence that the right diet, containing the correct level of vitamins and nutrients, is the best defence against disease.

Over the past 50 years the levels of iron, zinc, magnesium, selenium and other minerals important for the body's biochemical balance have severely declined in fruit and vegetables. Concern at the decline in quality of the average British diet has fuelled fear about the surge of nutrition-related diseases such as obesity and diabetes, the rates of which are continuing to escalate.

Ultralife Ltd was established in the UK in 2001 to research, develop, manufacture and market leading-edge nutritional products that assist in dealing with some of the key health challenges of our age. Guided by an international scientific advisory board, ultralife's range of nutritional supplements and health foods are manufactured under the strictest Good Manufacturing Practice guidelines available to the food industry today.

Ultralife's product range has been developed to offer nutritional excellence to all and offers a unique new food supplement delivery method that improves absorption. All Ultralife nutritional solutions are delivered as drinks, either in flavoured or unflavoured forms, replacing unpopular capsules and tablets.

This excellent range of superb products provides the ultimate nutritional solution for people that want the best available supplements for greater well-being. The highest quality ingredients are incorporated to guarantee the most complete and effective combinations of vitamins, minerals, co-factors, phytonutrients and antioxidants; ideal for people looking to achieve long-term nutritional excellence. The range is unparalleled in quality and features some of the most effective supplements to be found in the world today.

In order to suit a broad range of dietary tolerances and preferences, these products comply with international dietary standards including: no artificial colourings, no artificial flavourings, no artificial flavour enhancers, no added preservatives, no aspartame or saccharin, sucrose free, lactose free, dairy free, egg free, wheat free, gluten free, suitable for vegetarians, suitable for pregnant women, suitable for diabetics, suitable for children, non genetically modified

Health professionals and politicians alike are united in the likely impact of our current dietary regimes. Experts predict a health 'time bomb', unable to be managed by a conventional healthcare system that is already over-stretched with existing rates of degenerative disease. **Ultralife** products give consumers an alternative, accessible route to 'good health'.
